Two 10-in., one 14-in., and one 6-in. lines were laid on this trestle. Insert shows close-up of Multi-Flame Lindeweld Head in action.

Pipe Lines that couldn't fail and didn't . . . *with Lindewelding**

OVER the wastes and swamps of the Deltas of the Mississippi River, pipe lines had to be laid for a sulphur plant. Failure was unthinkable! Once laid, these lines had to stand up . . . without leakage or troubles that would jeopardize operation of a costly investment. This was the exacting demand that had to be met . . . even though piling for the trestles to support the line would sink 30 feet of its own weight.

Only one method of joining the piping for these lines could meet such brutal specifications. Lindewelding was the answer. From a past record of thousands of miles of pipe lines laid under all sorts of handicaps, Lindewelding had proved itself the type of jointless construction that would stand the gaff.

Lindewelding was used to install two 12 in. water lines, one 6 in. oil line, and one 14 in. gas line over miles of trestle. In addition, eight miles of 6 in., 8 in. and 10 in. lines were installed in the sulphur field running from the plant to the wells and other points. After installation, these lines were tested under 200 lb. water pressure . . . *without a leak!*

TODAY, after a year's operation, the lines have required no maintenance . . . developed no leaks.

During design and construction, Linde engineers extended to this company every cooperation to insure the most effective and economical welding procedures. You also, can get this kind of help when you need it from Linde Offices located in principal cities throughout the country and at 30 East 42nd Street, New York, N. Y. The Linde Air Products Company, Unit of Union Carbide and Carbon Corporation.

*Lindewelding is a new method of oxy-acetylene welding developed by the Linde engineering and research organizations. This method requires less oxygen, less acetylene and less welding rod. Welds can be completed in less time. Yet Lindewelding involves only a special flame adjustment and a "back-hand" technique, together with Oxweld No. 24 Lindeweld Process Welding Rod. When circumstances permit, the Multi-Flame Lindeweld Head can be used to increase further the speed of Lindewelding. This head costs \$7.75. Lindewelding is consistently saving 15 to 40 per cent in welding time, rods and gases.
